2018-02-06 World soils contain about
1500 gigatons of organic carbon. This large
carbon reserve can increase atmospheric
concentrations of CO₂ by soil misuse or
mismanagement, or it can reverse the
'greenhouse' effect by judicious land use and
proper soil management. Soil Processes and
the Carbon Cycle describes soil processes
and their effects on the global carbon cycle
while relating soil properties to soil quality
and potential and actual carbon reserves in
the soil. In addition, this book deals with

modeling the carbon cycle in soil, and with
methods of soil carbon determinations. 4677
