1975 Catch data of the Japanese tuna

longline fishery from 1964 to 1967 were analyzed to determine the distribution, abundance, and movement of skipjack tuna, *Katsuwonus pelamis*, in offshore waters of the Pacific Ocean. Large skipjack tuna, as well as larvae, were found to be concentrated mainly in the east central equatorial Pacific. Movement of skip-jack tuna stocks was determined by following the shifting of high-CPUE (catch per unit effort) cells from one quarter to the next. The apparent movement of skipjack tuna stocks in the Pacific appeared to coincide with the circulation of the major ocean currents; counterclockwise in the southern hemisphere and clockwise in the northern hemisphere, except in the eastern Pacific where the current flow is counterclockwise. The movement patterns of high CPUE suggested that skipjack tuna adults or their progeny could move from one area to the next. The movement pattern was used also to determine the probable migratory routes followed by skipjack tuna tagged in the eastern Pacific and recovered near the Hawaiian and Christmas islands. 6827 4022

1991-09-03 Reproductively Active Chemicals A Reference Guide Richard J. Lewis, Sr. Adverse effects on the human reproductive system due to chemical exposure are a growing concern of occupational safety and health professionals. While the effects of certain chemicals can be difficult to detect, and often go unnoticed or are mistakenly attributed to other causes, they can drastically increase risks of infertility, sterility, birth defects, and post-birth complications. Written by one of the foremost authorities in the field today, Reproductively Active Chemicals is the first book to identify, compile, and fully document the effects of more than 3,300 chemical substances known or suspected to cause adverse effects on human reproductive health. This major reference work features: Cross-indexes by synonym and identification number Vital information drawn from authoritative sources on hazardous chemicals, including chemical properties, toxicity, and synonyms Toxic effects indicating reported dominant reproductive effects The list of reproductively active materials covered here includes drugs, food additives, preservatives, ores, pesticides, dyes, and many other classes of materials. Some of the information also refers to materials of undefined composition. For each entry, the author provides the DPIM number,

entry name, CAS number, molecular formula, molecular weight, a description of the material, and physical properties. He specifies effects on the male and female reproductive systems, mating success, fetal effects including abortion and transplacental carcinogenesis, and post-birth effects. Each reproductive or teratogenic effect reported includes the dose and species exposed, a brief characterization of the exposure conditions, and a reference to the source of the data. Human effects are presented separately from animal data to highlight the data's importance. With its broad range of crucial, up-to-date information, Reproductively Active Chemicals is an essential sourcebook for professionals in industrial health and safety and related areas. It offers vital information for protecting current and future generations from the dangers of chemical exposure, and will be especially helpful to industrial hygienists and toxicologists, safety and risk managers, loss prevention personnel, and industrial insurers. 6827 85 viability index by ims rat TDLo 30 mg kg female 17D post KSRNAM 19 6827 85 Embryo or fetus death by ims rat TDLo 90 mg kg 7D preg KSRNAM 19 6827 85 fetotoxicity except death eg stunted

2013-10-22 Diagnostic Reference Index of Clinical Neurology aims to give the busy clinician a fast, easy-to-use guide to the core neurological literature published from 1980 to 1986. This book is divided into two sections, key words and references. The keywords section consists of neuroscience terms and each main entry is followed by reference citation numbers and corresponding references. This index, unlike the usual computerized systems for literature retrieval, is structured around clinical problems and uses the approach and terminology of a practicing neurologist. The contents were sources from the full text of articles that were published in critical core of fourteen major international English-language journals in medicine and neurology. This book will be of interest to neurology students and to practicing clinical neurologists. 6827 4449 7231 7231 4786 4632 7057 4449 4449 4786 5322 5323 6825 6827 6840 7206 3875 5193 6670 6836 5323 7206 7231 3692 3693 4828 4911 5193 5208 5767 7206 5208 6827 4811 4821 6866 7231 3875 4815 6234 6833 Ophthalmoplegia

1977 An apparently contiguous stock of American lobsters, *Homarus americanus*, is concentrated along the outer continental shelf margin and slope from Corsair Canyon westward and southward to the region of Baltimore Canyon. Between April 1968 and May 1971 we captured, tagged, and released a total of 7, 326 lobsters at 52 localities between Corsair Canyon and Baltimore Canyon. As of December 1972, 945 recaptures (12.9% recovery) had been reported, providing a basis for interpretation of seasonal and long-term movements, as well as measurements of growth rate and moult frequency. A classification scheme is developed and applied to distinguish between apparently directed seasonal movements (migrations), localized movements of less than 10 nautical miles (18.5 km), and long-period (>120 days) dispersions of 10 miles or more. This last category includes point to point tracks that cannot be objectively resolved in terms of directionality and may represent random dispersal, a summation of seasonally directed tracks, or both. We conclude from the track analyses that at least 20% of the offshore lobsters annually engage in directed shoalward migrations in spring and summer with return to the shelf margin and slope in fall and winter. This conclusion is reinforced by independent analysis of the time/depth/temperature associations of

tagged lobsters at recapture which, of itself, suggests that an even larger proportion of the offshore lobsters annually effect directed migrations in response to seasonal temperature variations. 6827 4022 6821 9 8 118 118 11 576F 23 48 8 4015 6827 4050 6917 48 52 122 122 31 584F 23 48 9 4015 6827 405 3 6841 84 39 85 97 11 646F 23 48 1 4015 6827 4010 6823 205 7 116 127 31 65UF 23 48 1 4015 6827 4007 6904 198 29 111 54 651F 23
